Blatchford's Calf Meal

This is in reality a substitute for milk---and should not be considered as an ordinary "feed" or "meal."

It contains all the elements of milk and when properly prepared becomes a "baby food" for calves and colts. It is just the thing for weaning calves as soon as they can be taken away from the cow. Then all the milk may be sold and you get the benefit of the high creamery prices.

It is absolutely the only milk substitute that contains all the elements necessary for rapid and healthy growth, and the only calf meal that is thoroughly cooked and prepared for digestion.

Will push calves and colts forward better and quicker than any other food.

The Queen is the Only Brooder Stove with Automatic Control of Both Check and Draft

BURNS ANY KIND OF FUEL

The Queen burns any kind of fuel with equally satisfactory results. We recommend chestnut sizes in all kinds of fuel and hard or soft coal, coke, charcoal or briquettes burn equally well. Of course, hard coal will not cause the pipes to become dirty as quickly as the others, but it will give no better heat.

CONSTANT, CORRECT HEAT

The Queen stove provides a constant, correct heat, and a constant distribution that makes the chicks develop into strong, healthy fowls. By brooding outside the hover, the chicks get plenty of pure, fresh air, plenty of exercise, and there is no possible chance of hem crowding or suffocating.
